About Me

Susan Young is an IT professional based in Orlando Florida. Her skills have evolved through software development, web development, database administration, Financials Systems Implementation and Support and Business Intelligence Dashboarding.

Susan wanted to expand her skill set into data analytics and data science. So, she completed the Data Analytics and Visualization Bootcamp at the University of Central Florida. Branching into data analytics was a logical extension of her extensive background with Business Intelligence, SQL, ETL and databases.

Susan wants to use data to help business make informed decisions by identifying trends and patterns in the data and to train machine learning models to predict outcomes based on historical data.

"Don't let your learning lead to knowledge. Let your learning lead to action."
– Jim Rohn
